Kayla Clarke

1. What are the three basic technologies needed to run a website?

Web hosting (space), web design (presenting content) ,domain name (address).

2. What are local files, what are web servers, what is FTP and how are they related?

Local files are computer files. Web pages are files stored on computers called <u>web servers</u>. FTP stands for File Transfer Protocol, it's what people use to transfer computer files from one host to another host over the internet.

3. What is AFS Space and what does it allow you to do?

AFS (Andrew File System) was created to provide a campus-wide file system for home directories which would run effectively using a limited bandwidth campus backbone network. AFS is secure, has widespread access, can be used to back-up important date files (term papers, dissertations, etc...)

4. What is the URL for the web space MSU provides for you in your AFS Space?

https://www.msu.edu/~clarkek8/
